

B&A ENERGY SERVICES SPOTLIGHT

PLANNING & DEVELOPMENT APPROVALS

Supporting energy providers implement their site planning & development visions through the municipal planning & regulatory approval process.

B&A has a 35+ year history in land use planning and development in Canada, and has worked on behalf of municipalities, developers, and landowners to develop planning policy and secure approvals for a wide variety of development projects.

Supported by our design leadership and visionary master plans, we are adept at securing complex land use and development approvals to support project implementation. Our expertise in this area stems from our ability and experience in working with local jurisdictions and stakeholders to find optimal solutions to issues and challenges that may arise during the planning process.

We are experts in providing project management, land use planning, design, visualization and communications expertise to advance projects from concept to implementation. Our planning and approvals expertise range from statutory plan development to master site development plans, land use, subdivision and development permit approvals.

SERVICE BENEFITS

- + Facilitating the highest and best use of land holdings
- + Gaining support through integrated communications and engagement initiatives
- + Supporting innovative land use and development initiatives through the planning process
- + Innovative master site planning and design
- + Securing Municipal Approvals
- + Inter-Jurisdictional Coordination

Providing strategic planning solutions for pipeline operators

Stemming from our deep understanding of municipal planning and land development processes across Canada, B&A Energy has developed a customized approach to meet the unique needs of energy sector clients.

Our integrated team of accredited professionals with expertise in project management, land use and development planning, communications, and geographic information systems has enabled us to develop a suite of customized services for energy providers ranging from planning and development approvals to customized land use planning and development monitoring programs.

We are proud to continue to provide value-generating solutions in partnership with some of the most well respected energy clients across North America.

Energy Service Areas

Planning & Development Approvals

Supporting energy providers in the implementation of their site planning & development visions through the municipal planning & regulatory approval process.

Notification Monitoring Program

Capitalizing on the municipal & industry notification process to educate stakeholders on planning in proximity to pipelines & keep operators apprised of changes in proximity to their networks.

Priority Growth Area Identification

System-wide data driven analysis to identify areas of development intensification to support informed capital planning or the identification of areas for further evaluation or monitoring.

Priority Growth Area Monitoring

Providing pipeline operators with a simple resource to identify & stay informed about impactful future development in proximity to their pipeline networks.

Class Location Assessment

Providing pipeline operators with comprehensive assessments of existing and future land use conditions to identify potential future changes in class location designation.
